

Wood and Building Materials

Wood has been attracting public attention as a reproducible natural resource, becoming an indispensable product for our lives and various fields of the society. Emachu group has been engaged in procurement and supply of wood and has contributed to Japan's social development for more than 90 years. Emachu group has adapted to the changes of demand regarding wood and building materials, and will continue to meet the needs of our customers.

Using wood from certified and appropriately managed forests lead to environmental contribution. Each piece of wood has different characteristics that need to be discerned and sorted properly for its use. Emachu group is a reliable company which has polished its percipient through the experience of trading wood since its establishment in 1923.

Japanese demand for wood has undergone significant changes due to changes of people's lifestyle and the legal system. Emachu group's wood and building materials business has always adapted to the changes of the market and customers' needs. In recent years, Emachu group has been working on the utilization and promotion of domestic wood. In addition, Emachu group has been promoting utilization of wood for various kinds of buildings such as educational, welfare, and commercial facilities.
